

According to the analysts

Somewhere in the region of 80% of telecoms bills include errors which organisations never find or report. On top of that, around 35% of fixed telecoms assets are actually not required by the businesses which own them. According to the researchers, over 60% of companies have no formal or accurate register of their telecoms estates. Thinking about it, when analysts generally quote that external communication is a 'top-three', non-payroll cost centre in most of the large organisations in the UK, it's actually quite scary.

Telecoms Cost Management

Many organisations are paying for equipment and lines they no longer have. If you can't measure it, you can't manage it. We tell you what you have and more to the point what you don't have. There is no fixed amount of savings, but historically clients have saved circa 30% on overall telecoms costs. Alongside our partners, we will drastically identify and reduce wherever appropriate.

We analyse your fixed line, data and mobile services and then benchmark them against the best that the competition has to offer. Typically this enables us to identify savings for our customers of around 30% on their annual telecoms spend and often more. This not only covers the cost of our services, but also frees up plenty of available ICT budget which can then be spent on other essential ICT projects.

Each week that passes is another week which could be costing you around 30% more than it needs to. So to find out how much we could save you, please contact us today. We will give you a complete and accurate view of how much you are spending on fixed line, data and mobile services.

Risk Free

If we can only identify savings of less than 10% then we do not charge for our services at all, making the process completely risk-free.

Clarity – in three easy stages

The service begins with an Assessment of your situation as it currently stands, and then the next stage is a Benchmarking exercise which makes a comparison between this and the marketplace. Once these processes are complete we can identify how much money could be saved, a figure that is typically around 30%. And what's more, at least half of our clients can make these savings without having to change their network provider!

Once we have implemented the recommendations, the third stage of the process involves our ongoing Management service. This gives you simple web-based access to our platform, enabling you to monitor and manage all aspects of your fixed line and mobile telecoms estate. We take the data from your telecoms bills and enter into the system every month - then all you need to do is to track it all using our configurable and intuitive management dashboard.
